Stardust Image Encoder is a time-saving, fast, and powerful multi-format image encoder. It delivers real-time preview and makes your settings last. It is powered by 2 powerful engines, StarQuality and StarCompress. StarQuality lets you to apply quality settings, such as Size, JPG, BMP, TIF, JPEG, JPG and more. You can quickly convert to smaller formats to optimize the disk space. StarCompress is a compression engine that allows you to apply advanced settings in such a way to get your high quality image converted to lower quality formats. You can choose from many different methods, options, presets and even install your own in-house filters. There are over 6 filters in StarCompress out of the box: JPEG 200, JPG, TIF, BMP, JPEG and J2K. You can encode images or batch convert to all image formats, PNG, JPG, J2K, BMP, JPEG, J2K, GIF, TIF, ICO, PNG, HP3, XPM, IFF, TGA, HP4, SFX, SGI, PSD, PCX, DXF, PCD and even S3M and WAV. You can choose from all standard and most popular image types, such as JPG, BMP, JPEG, TIFF, PNG, HP3, HP4, XPM, ICO, PIC, GIF, SGI, S3M, WAV and many others. You can also specify the output format options and name tags for your images. For example, you can convert all JPG images to J2K and PNG, all TIFF images to JPEG and all other to GIF. You can embed an image watermark into your image. StarQuality has an image viewer and a regular monitor viewer, and there's also an icon for Explorer, which makes it very easy to use. The conversion process is fairly straightforward, and the application lets you save the original size image, or any other size or format, as well as a preview in real-time, before conversion. When you convert images, for example, you can specify Image Quality and Resize, and you can preview any conversion instantly. You can easily copy and paste and run commands at the same time. Additional features that make StarQuality unique include the following:

- Image Size: Make an image larger or smaller than its original size,

What's New In Stardust Image Encoder?

Stardust Image Encoder is a suite of three powerful and time-saving tools, each designed to allow you to easily convert images into smaller high-quality formats. Stardust Image Encoder offers real-time preview, state-of-the-art compression, easy cropping and resizing, watermark capability, adjustments, batch and command-line processing, and more. The application is able to support multiple image file formats: GIF, PNG, JPEG 200, JPG, PNG, TIFF, BMP and more. Image Encoder lets you fine-tune all settings for an image, with a full preview of every transformation. You can resize to any dimensions, or select only one dimension and let Image Encoder calculate the other one. Cropping is made easy with a moveable cropping frame, and you can select the exact dimensions of the desired crop. You can add a watermark to customize and protect your images, adjust brightness and contrast, even convert to black and white or sepia tone! Any change can easily be undone without affecting any other changes or settings. Image Encoder Batch Wizard lets you encode multiple image files in a single operation. Use the settings from the main wizard to convert a set of image files to the same format and quality, resize to the same dimensions, add a watermark to all images, or convert them all to black and white or sepia tone. You can save images in their original folders, or put all encoded images into the same destination folder. Image Encoder Command-Line Utility lets you encode images from a command prompt, so you can incorporate image conversion into your batch files and scripts. Batch resizing and conversion to black and white and sepia tone is supported. Image Encoder reads 23 file types from 12 major categories of file formats and writes to all the most important compressed file formats (JPG, J2K, PNG, GIF). Version History: Version 3.7.5: New Feature: In addition to JPG files, Image Encoder can handle TIFF files and support PNG files as input and output file formats. When converting TIFF images, Image Encoder supports 8-bit and 16-bit subpixel size sampling, but this functionality is disabled by default. New Feature: You can add a user-defined watermark to an image. Watermark can be added to JPG, GIF, PNG, TIFF, and BMP files. New

System Requirements:
